MARTÍN CAPUANO

Full-Stack Developer · TypeScript (Next.js, NestJS) · C# / .NET · Linux

Carmelo, Uruguay · Open to Remote (US / LATAM timezones) · capuano.martin@outlook.com

capuanomartin.dev · github.com/capua25 · linkedin.com/in/capuanomartin

PROFESSIONAL SUMMARY

Full-stack developer with 3+ years of professional experience building and operating systems for real clients: a multi-tenant sports events platform (NestJS, Next.js, PostgreSQL), a municipal management platform in pilot (.NET, PostgreSQL), a manufacturing ERP (Avalonia, Django REST) and ERPs for a home goods retailer and an import company. Owns the full lifecycle: architecture, automated testing and CI, Docker-based deployment on self-managed Linux servers, monitoring and client support. Mechatronics Engineering coursework brings strong logical-mathematical foundations and systems thinking. Comfortable working autonomously in remote, async environments.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, C#, Python, SQL, PHP, HTML5, CSS3, C
- **Frameworks & Libraries:** Next.js, React, NestJS, Prisma, .NET / ASP.NET Core, Entity Framework Core, Avalonia UI (MVVM), Django REST Framework, Node.js, Astro, TailwindCSS
- **Databases & Backend Services:** PostgreSQL, Redis (BullMQ), MySQL, HFSQL, Supabase; relational and multi-tenant data modeling
- **Testing:** Jest, Vitest, Playwright, xUnit, Moq, Testcontainers, Django test framework; integration, headless UI and visual regression tests
- **DevOps & Infrastructure:** Docker / Docker Compose, GitHub Actions CI, nginx, Let's Encrypt TLS, Linux server administration (hardening, systemd, backup and restore scripting), Turborepo / pnpm monorepos, Vercel
- **Tools:** Claude Code, Postman, VS Code, Linux CLI
- **Languages (spoken):** Spanish (native), English (Professional working proficiency, B2+)

SELECTED PROJECTS

PinAr — pinarsports.com *TypeScript · NestJS · Next.js · PostgreSQL*

- Multi-tenant sports events platform for Uruguay (road running, triathlon), live in production: clubs and organizers publish events, manage members and scored championships, and collect registrations through their own MercadoPago accounts.
- Turborepo monorepo: NestJS 11 API with Prisma on PostgreSQL, Redis/BullMQ background jobs and JWT auth; Next.js 16 / React 19 frontend with i18n (next-intl) and Sentry error monitoring.
- Tenant isolation enforced server-side: the organization scope is resolved from the database on every request, never trusted from the client or the token.
- GitHub Actions CI running typecheck, lint, unit tests (Jest, Vitest) and integration tests against real PostgreSQL and Redis; deployed with Docker Compose (staging and production), nginx and Let's Encrypt TLS on a VPS.

Gestión Municipal — municipal management platform *C# · .NET 10 · PostgreSQL · Avalonia*

- Management platform for the Municipality of Carmelo (Uruguay), now in pilot rollout; grew from an inventory-control app into a system covering finance, projects, administrative records and stock.
- Finance: annual operating plan (POA) budget lines and allocations, funding sources, expenses and payments by category, payment calendar, cash income and cash book, with expenses charged to projects.

- Projects and tasks with responsible organizations, administrative document tracking with attachments, and inventory (products, suppliers, entries by invoice, movement history, valuation).
- Role-based permissions, audit log, configurable alerts, backups and PDF/Excel reports; ASP.NET Core REST API (JWT, EF Core, PostgreSQL) and Avalonia MVVM desktop client in Clean Architecture.
- 13 test projects (unit, Testcontainers integration against PostgreSQL, API, headless UI, visual regression); self-hosted on a Linux VPS with Docker Compose, systemd, TLS and Velopack auto-updates.

CabaGestion — ERP for a metalworking company *C# · Avalonia · Django REST · PostgreSQL*

- ERP in production covering customers, invoicing, quotes, expenses, creditors, statistics dashboards and audit logging.
- Windows desktop client in .NET 10 / Avalonia (MVVM) consuming a Django REST Framework API on PostgreSQL, with a self-hosted auto-update channel served by the same API.
- Tested at both ends (Django API and model tests, .NET view-model tests); deployed with Docker Compose (Gunicorn, nginx, automated backups) behind Let's Encrypt TLS.

PinAr, Gestión Municipal and CabaGestion are private repositories; code walkthrough available on request. More projects: github.com/capua25.

WORK EXPERIENCE

Software Developer · Eurogen S.R.L. / B&V Importaciones S.R.L. *Jun 2023 — Present*

- Designed and developed ERP systems used six days a week by 50–70 staff at a multi-branch home goods retailer and an import company: relational data modeling, multi-branch operations and full SDLC ownership in production (WINDEV / HFSQL).
- Maintained and improved legacy software: bug fixes, performance optimization, and feature updates across the full SDLC.
- Built and administered Linux servers focused on performance, uptime, and security (hardening, access controls, monitoring).
- Provided ongoing technical support, troubleshooting, and IT consulting across multiple business units.

Full-Stack Web Developer · Freelance *Jan 2023 — Present*

- Designed, built and operate PinAr, CabaGestion and Gestión Municipal end-to-end: architecture, implementation, automated testing, VPS deployment and ongoing support.
- Built and shipped production web applications with TypeScript, Next.js, React, Astro and TailwindCSS, including Supabase backends and MercadoPago payment flows.
- Worked directly with clients end-to-end: requirements, design, development, deployment (Vercel, self-hosted Linux), and post-launch support.
- Contributed to additional projects using PHP and Python for backend services and integrations.

EDUCATION & CERTIFICATIONS

Web Development — Ceibal · Jóvenes a Programar *2023*

Completed. Full-stack web development with HTML, CSS, Bootstrap, JavaScript, Node.js, Express, MySQL, and Git/GitHub.

Google IT Automation with Python — Coursera (Google) *2022*

Completed. Task automation with Python, Git, configuration management, troubleshooting, and cloud fundamentals.

Mechatronics Engineering (incomplete) — UTEC Universidad Tecnológica *2018 — 2022*

Degree not completed; finished 6 of 10 semesters: embedded systems, electronics, control theory, calculus and programming. Left to pursue software development full-time after discovering programming through the program. The coursework built strong logical-mathematical foundations and systems thinking.
